# Garage

# 11 FAAC

#### Divide it up!

## Ready

- 4 number cubes
- Paper and pencil

### Set

Give each player paper and a pencil.

### Gol

- Have the first player toss all 4 cubes and create 2 fractions from the 4 cubes. For example, if a 3, 4, 5, and 6 are tossed, the fractions could be  $\frac{3}{4}$  and  $\frac{5}{6}$ , or  $\frac{5}{4}$  and  $\frac{3}{6}$ , etc.
- Divide the first fraction by the second fraction.
- Have the other players toss the cubes, create fractions, and divide their fractions. That is the player's score for the round.
- Repeat the steps, adding together the scores from each round. The first player to reach a total of 10 wins the game.
