

Game Time

A Maze of Numbers

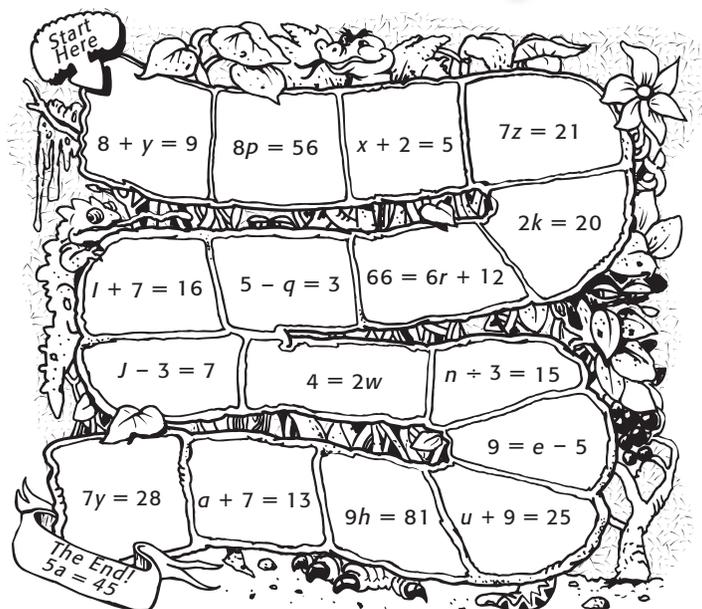

Ready

You will need:

- A different type of coin for each player
- Number cube
- Paper and pencil

Set

Copy the game board onto a sheet of paper. Make sure each square is big enough for at least one coin.

Go!

- Place the coins at the start, outside the box.
- Toss the number cube. The player with the greatest number becomes player 1. Players take turns in a clockwise fashion.
- Have player 1 toss the number cube and count the number of boxes on the game board, following the arrow. If player 1 is able to correctly solve the equation in the box they landed on, they move their coin to that box. If player 1 is not able to solve the equation correctly, they stay at the current position.
- Take turns tossing and solving problems. The first player to reach the end and to correctly solve the final equation wins the game.
